Declaration of Daniel Buffington, PharmD, MBA

I, Dr. Daniel E. Buffington, under penalty of perjury, declare the following to be true:

1. I have received and reviewed the records that were provided to me pertaining to the case *Raymond Tibbetts, Ronald Phillips and Gary Otte (Plaintiffs) v John Kasich, Gary C. Mohr, Ronald Erdos, Donald Morgan, Stephen Gray, Edwin Voorhies, Richard Theodore, Charlotte Jenkins, John Coleman, Unnamed and Anonymous Execution Team Members, Unknown Pharmacies, Unknown Pharmacists, Unknown Drug Suppliers, and John Does* (Case No.2:11-cv-1016). These documents include but are not limited to: Case Complaint, Amended Case Complaints (Ronald Phillips (10-26-16), Gary Otte (10-26-16), Raymond Tibbetts (10-26-16)); Expert Declarations (Craig W Stevens, PhD (12-19-16), Ellen M Unterwald PhD (12-19-16), Sergio Bergese, MD (12-20-16), and Dennis R McGuire (12-20-16)); Westlaw Citation [Glossip et al v GROSS], and Ohio Department of Rehabilitation and Correction Policy for Lethal Injection (10-07-16).

2. I am a Clinical Pharmacologist and Toxicologist and practice in Tampa, Florida. My training includes a Doctor of Pharmacy (PharmD) degree and Master of Business Administration (MBA) degree from Mercer University. My post-graduate training includes a Clinical Pharmacy Residency and Clinical Pharmacology Fellowship at Emory University. I am on the faculty of the University of South Florida Colleges of Pharmacy and Medicine. I serve as the President and Practice Director of Clinical Pharmacology Services (CPS), and I am also the President and Executive Director of the American Institute of Pharmaceutical Sciences (AIPS). I serve as a Medication Safety Specialist with the United States Department of Health and Human Services. My professional practice activities include a clinical pharmacology consult service, clinical research design and management, technical consultation support services (clinical and forensic), and health care consulting. In addition to my clinical practice activities, I also provide additional academic training programs (i.e., experiential training and mentoring) for medical students, pharmacy students, nursing students, post graduated trainees (i.e., residents, fellows, and post-doctorate trainees). I have presented specialty conferences for law enforcement agencies, health care agencies, judicial conferences, and other community wide venues. I routinely present to other universities, professional conferences, regulatory boards, legislative committees, and media interviews on clinical pharmacology and toxicology topics. As part of my academic responsibilities have served as "visiting faculty" with multiple universities to assist in advance curriculum and clinical services development. I have served as a health care consultant in other countries to provide clinical pharmacology and toxicology support for practitioners and government health care agencies. My academic lecture

topics include clinical pharmacology, toxicology, healthcare practice management, healthcare laws and regulations, forensic pharmacology.

3. My educational background, employment experience, professional licenses, faculty appointments, specialty training, consulting activities, publications, and research protocols are described in detail in my Curriculum Vitae (CV), which is attached to this Affidavit and incorporated by reference.

4. I have been tendered and served as an expert witness in numerous types of cases including civil and criminal matters relating to the area of clinical pharmacology and toxicology. I have also served as an expert for the United States government, courts, private counsels, and law enforcement agencies, providing forensic and technical support and services surrounding pharmacology, standards of care, proper prescribing, therapeutic decision making, malpractice, clinical research, substance abuse, health policy, clinical therapeutics, therapeutic drug monitoring, patient safety, and consumer information and education. In the course of my professional activities I have also reviewed and provided scientific and technical support and feedback to the State of Ohio's Office of the Attorney General, and the Ohio Department of Rehabilitation and Correction on non-health care related inquiries pertaining to the pharmacologic mechanisms of action and physiologic effects of the medications that are employed within lethal injection protocols. (See attached list of prior forensic cases)

5. The utilization of properly administered midazolam IV at a dose of 500 mg will render an individual unconscious. Midazolam is a short acting benzodiazepine that is FDA approved and routinely utilized as a sedating and tranquilizing agent in diverse clinical practice settings. As a class, the benzodiazepines share similar chemical structures, but vary widely in their physicochemical properties, specifically their distribution rates, clearance rates, onset of action, and duration of therapeutic effects. The drug concentrations may be compared based upon their relative solubility in the aqueous and organic phases (Leo et al., 1971; Ritschel, 1980). The most lipophilic benzodiazepines include diazepam and midazolam, possessing the highest volume of distributions (V_d). While this increase in lipophilicity and unbound V_d benefits the rapidity and magnitude of pharmacologic effect, it has also been associated with a reduced duration of pharmacodynamic action (Arendt et al., 1983).

Midazolam is utilized as a premedication to produce sedation, reduce anxiety, induce and maintain anesthesia, induce anterograde amnesia, and the treatment of specific seizure disorders. The US Food and Drug Administration's (FDA) Approved Package Insert (PI) illustrates the full list of clinical indications for midazolam, which include:

- 1) Preoperative Sedation / Anxiolysis with Amnesia
- 2) Anesthesia (Induction and Maintenance)

- 3) Sedation of Intubated / Ventilated Patients
- 4) Refractory Status Epilepticus
- 5) Seizure Clusters (Orphan)

| FDA Approved Indications Related to Sedation & Established Dosing Ranges |
|---|
| <p>Preoperative Sedation / Anxiolysis with Amnesia:</p> <p>Adult (IV) –</p> <p>Initial: Usually 0.5-1 mg given over 2 minutes (not to exceed 2.5 mg/dose); wait 2-3 minutes to evaluate sedative effect after each dose adjustment; total dose >5 mg usually not necessary to reach desired sedation; use 30% less midazolam if patient premedicated with narcotics or other CNS depressants.</p> <p>Debilitated or chronically ill patients: 1.5 mg IV initially; may repeat with 1 mg/dose IV q2-3 min PRN; not to exceed cumulative dose of 3.5 mg; peak effect may be delayed in elderly, so increments should be smaller and rate of injection slower.</p> <p>Maintenance: 25% of initial effective dose PRN by slow titration; reduce 30% if premedicated with opiate (50% in elderly/chronically ill).</p> <p>Geriatric (IM & IV) -</p> <p>IM: 1-3 mg (~35-40 mcg/kg) 30-60 minutes before surgery; some elderly patients may respond to as little as 1 mg; onset is 15 minutes (peaking at 30-60 min)</p> <p>IV (>60 years): 1.5 mg initially; may repeat with 1 mg/dose q2-3min PRN; not to exceed cumulative dose of 3.5 mg; peak effect may be delayed in elderly, so increments should be smaller and rate of injection slower.</p> <p>IV maintenance: 10-15% of initial effective dose PRN by slow titration.</p> |

Anesthesia:**Induction –****<55 years without premedication:**

300-350 mcg/kg IV injection over 20-30 seconds; wait 2-3 minutes to evaluate sedative effect after each dose adjustment; may use increments of 25% of initial dose PRN to complete induction; may use up to 0.6 mg/kg total dose in resistant cases, but such dosing may prolong recovery.

>55 years without premedication and with no systemic disease, in a patient who is not weak:

300 mcg/kg over 20-30 seconds initially; wait 2-3 minutes to evaluate sedative effect after each dose adjustment.

>55 years without premedication but presence of systemic disease or weak patient:

200-250 mcg/kg over 20-30 seconds usually enough; 0.15 mg/kg enough in some cases; wait 2-3 minutes to evaluate sedative effect after each dose adjustment.

>55 years with premedication:

150-350 mcg/kg IV injection over 20-30 seconds; wait 2-3 minutes to evaluate sedative effect after each dose adjustment; a dose of 250 mcg/kg usually enough to achieve desired effect.

Maintenance –

May administer increments of 25% of induction dose PRN when there are signs that anesthetic effects are lightening.

Geriatric Dosing –

Typical adult induction and maintenance doses may need to be decreased in some elderly patients by 20-50%, because the elderly overall are more susceptible to CNS depressants than is the general population.

Sedation of Intubated/Ventilated Patient:**Load –**

10-50 mcg/kg (dose range 0.5-4 mg) slow IV injection or infusion over several minutes; repeat q10-15min PRN.

Maintenance –

Initial, 20-100 mcg/kg/hr infusion; titrate up or down 25-50% PRN.

Medscape / FirstDataBank, 2015

FDA Approved Package Insert, Baxter Health Care Corporation, Rev. 4/10

Midazolam is a potent sedating agent that requires individualization of dosage and is estimated to be 3 to 4 times more potent, mg per mg, than diazepam (Valium®). The pharmacologic effects of midazolam have been documented to be dose-dependent. Clinical research trials have demonstrated that doses in the 0.5 – 3.5 mg range provide preoperative sedation and anxiolysis with amnesia. The dosage may be reduced when administered concomitantly with other central nervous system depressants due to synergistic pharmacologic effects. Doses as low as 10 mg have been reported to result in serious central nervous depression, multisystem organ failure, and cardiac arrest, resulting in death (Baselt, 2011).

The FDA Approved Package Inserts for midazolam also describe that patients receiving midazolam may experience serious cardiorespiratory adverse events. These complications included respiratory depression, airway obstruction, oxygen desaturation, apnea, respiratory arrest and/or cardiac arrest, sometimes resulting in death or permanent neurologic injury. Rare reports of hypotensive episodes have occurred in both adult or pediatric patients with preexisting hemodynamic instability. Reductions in blood pressure were more commonly identified in sedation studies in those patients who were pre-medicated with a narcotic. Other reactions such as agitation, involuntary movements (i.e., tonic/clonic movements and muscle tremor), hyperactivity, and combativeness were also observed. Adverse reactions may be the result of a physiologic response, dosage administered, method of administration, indications of cerebral hypoxia, or paradoxical reaction (Hospira, 2010). Observations of physical activity or motor response during the administration of midazolam should not be presumed to indicate that an individual is conscious, aware of their surroundings, or has the capacity to discern pain or other types of sensations.

FDA Approved Package Insert – Section: Dosage and Administration

BECAUSE SERIOUS AND LIFE-THREATENING CARDIORESPIRATORY ADVERSE EVENTS HAVE BEEN REPORTED, PROVISION FOR MONITORING, DETECTION AND CORRECTION OF THESE REACTIONS MUST BE MADE FOR EVERY PATIENT TO WHOM MIDAZOLAM INJECTION IS ADMINISTERED, REGARDLESS OF AGE OR HEALTH STATUS. Excessive single doses or rapid intravenous administration may result in respiratory depression, airway obstruction and/or arrest. The potential for these latter effects is increased in debilitated patients, those receiving concomitant medications capable of depressing the CNS, and patients without an endotracheal tube but undergoing a procedure involving the upper airway such as endoscopy or dental (see BOX WARNING and WARNINGS.)

FDA Approved Package Insert, Baxter Health Care Corporation, Rev. 4/10

Midazolam's half-life is 1.8 to 6.4 hours (mean approximately 3 hours), the volume of distribution (V_d) ranges from 1.0 – 3.0 L/kg (Baselt, 2011), and total clearance (Cl) ranges from 0.25 to 0.54 L/hr/kg (Hospira). The toxic plasma concentration range for midazolam in humans is 1.0 – 1.5 mcg/mL (Reganthal, 1999). Based upon a 70 kg individual and these pharmacokinetic variables, a dose of 500 mg IV of midazolam would be expected to result in concentrations of 2 to 7 times the toxic plasma concentration range (2.38 – 7.14 mcg/mL). The manifestations of midazolam over dosage are like those observed with other benzodiazepines, including sedation, somnolence, confusion, impaired coordination, diminished reflexes, coma, and loss of vital signs.

6. The pharmacological effects after the proper administration of two or more doses of midazolam 500 mg IV as described in the Ohio Department of Rehabilitation and Correction's Execution

Procedures (ODRC EP, 10/07/2016) are sufficient to produce sedation, anterograde amnesia, and induce a significantly reduced level of consciousness so that the individual would not experience severe pain upon the timely rapid administration of the second and third drugs employed within the Ohio Execution Protocol as described in Option 3) A Three-Drug Combination of: a. midazolam hydrochloride; and b. one of the following three drugs (i. vecuronium bromide; or ii. pancuronium bromide; or iii. rocuronium bromide; and c. potassium chloride).

The United States Food and Drug Administration performs scientific and clinical reviews of medications to support their subsequent product approvals. The FDA product approval process includes the designation of specific therapeutic indications based upon product development data. This should not be interpreted to infer that a medication or substance can only be utilized or administered for the specific indication(s) as set forth in the listed FDA approved treatment indications. In fact, the FDA acknowledges and supports the fact that medications and substances may be utilized routinely for off label uses.

Off Label Use:

"If physicians use a product for an indication not in the approved labeling, they have the responsibility to be well informed about the product, to base its use on firm scientific rationale and on sound medical evidence, and to maintain records of the product's use and effects."

<http://www.FDA.gov/RegulatoryInformation/Guidelines/ucm126486.htm>

7. The administration of midazolam, at standard dosages, is sufficient to result in loss of consciousness (i.e., sedation or induction of anesthesia). Anesthesia is defined as the partial or total loss of sensation, especially tactile awareness, resulting from disease, trauma, acupuncture, or a medication with anesthetic properties. An anesthetic agent is a medication or substance that can produce local or general insensibility to pain, with or without the loss of consciousness. Anesthetic agents may be administered topically, locally, regionally, or generally, depending on the product formulation and body target area. Fundamental to the concept of anesthesia is the loss of sensation and/or consciousness without loss of vital organ functions artificially produced by the administration of one or more agents capable of blocking the passage of pain impulses along nerve pathways to the brain (Taber's Cyclopedic Medical Dictionary, 2013; Merriam-Webster, 2015).

Bispectral Index (BIS) is a technology utilized to measure the depth of anesthesia. BIS values of less than or equal to 60 are considered indicative of general anesthesia. In Liu et al., total doses of midazolam ranged from 4.5 – 20 mg with dosing increments ranging from 0.5 – 1 mg bolus doses, every 6

– 10 minutes. The mean total dose in this study was 9.1 mg, until individuals became unresponsive to tactile stimulation (i.e., mild prodding or shaking). At this point of sedation, an individual's average BIS value was 69. Bulach et al., demonstrated individuals reaching BIS levels as low as 66 with standard doses midazolam as low as 10 mg IV and within 4 minutes of administration. From this time, onwards, the midazolam groups had an increasing dose-responsive effect in relation to their BIS scores (Bulach et al., 2005). There is no human data to support the assumption that administration of doses of midazolam 500 mg IV or greater would alter or abate the observed trends of increasing dose-dependent sedative effects of midazolam.

Theoretical assertions stating that an individual would sense pain during the lethal injection protocol process, attributable to presumed limitations of pharmacologic effects of midazolam in humans, are fundamentally defective. Academic arguments that an individual would have the capacity to sense pain or the ability to discern and quantify pain, by type or level of intensity, at any point during the rapid sequential dosing of protocol-based medications, are clinically unsupported. Any assertion that an individual being administered the ODRC execution procedures (including the use of midazolam 500 mg IV), would have the ability to experience, discern, or articulate the nature of discomfort (i.e., pain or suffering) or the degree of intensity is purely speculative.

8. While some authors have postulated that midazolam may have a theoretical ceiling effect, there are no medical or scientific studies or cases that document the dosage level or clinical conditions that would be necessary to render such a ceiling effect. In addition, given the significantly high dosage of midazolam being administered (well in excess of both therapeutic and toxic ranges), the rapid sequential administration of the of the three pharmaceutical components within the ODRC's execution procedures, and the dose-related amnestic effects associated with midazolam, the concept that the patient would have capacity to discern any clinical effects related to a theoretical ceiling effect (i.e., changes in consciousness or variable levels of discomfort) is unsupportable. There is currently no scientific data in humans to support the assumption that a "ceiling effect" for sedation occurs at or before 500 mg IV midazolam.

9. Based upon the increasing dose-dependent sedative effects, midazolam is known to produce anterograde amnesia. Anterograde amnesia is the loss in the ability to form new memories, which occur either after an incident or during a period of pharmacologic activity. Numerous clinical trials have confirmed and validated the development of anterograde amnesia, and other researchers are investigating the capacity for retrograde amnesia as well. Like sedation, midazolam's pharmacologic effect

of producing anterograde amnesia is also dose dependent. The anterograde amnestic effect observed with midazolam is comparable to that of propofol, thiopental, and fentanyl (Veselis, 1997).

Midazolam's sedative and amnestic effects significantly impact an individual's level of consciousness and the capacity to perceive pain, discern its level of intensity, and to form functional memory during the period of its pharmacologic activity.

10. There is no scientific or medical evidence to support the concept that midazolam (IV), at low or high dosages, would result in significant hypotensive events (i.e., profound decreases in SBP and DBP from baseline) prior to the onset of sedation, or that it is capable of inducing or worsening ischemic cardiac damage, acute cardiac events, excruciating pain and/or suffering.

11. Based upon the fact that, a) a "ceiling effect" has never been demonstrated in humans, b) midazolam's pharmacologic effects are known to be dose-related, and c) midazolam is highly lipophilic, it is more likely than not that doses of 500 mg or greater would render BIS values progressively lower than 69. BIS levels lower than 60 are indicative of general anesthesia, which render an individual reliably unconscious and insensate to noxious stimuli. Based on the above, I conclude, with a reasonable degree of scientific and medical certainty that a 500 mg IV dose of midazolam would likely result in a BIS level lower than 60 and render a person unconscious, with anterograde amnesia, and insensible to noxious stimuli.

12. I hold all opinions expressed to a reasonable degree of scientific and medical certainty.

13. The opinions expressed in this Affidavit are based on my review of the scientific and medical literature to date.

14. I have prepared this Affidavit at the request of the State of Ohio Attorney General's office in connection with pending litigations involving the State's Execution Procedures.

15. My fee schedule for this matter is as follows: a. Preliminary Case Review and Oral Opinion: \$2,400, flat fee; b. Case Review, Research, Reports, Pretrial Preparation, and Miscellaneous Services: \$400 per hour; c. Deposition Appearance: \$400 per hour; d. Courtroom Appearance: \$3,200 per day.

16. I reserve the right to amend my opinions should further research, data, investigation, knowledge, and experience reveal a basis for doing so.

17. I declare under penalty of perjury under the laws of the United States of America that the above information is true and correct to the best of my knowledge.

SPECIALTY TRAINING:**National Association of Drug Diversion Investigators (NADDI)****Southern Regional Training**

St. Pete Beach, FL

May 7-8, 2015

Curriculum Vitae, Page 4

Daniel E. Buffington, PharmD, MBA

07-06-15

Nephrology Preceptorship

University of Pittsburgh, School of Pharmacy, Gary Matzke, PharmD, Program Director
Nephrology, October 25, 1995

Transportation & Management of Hazardous Materials

Morton Plant Mease, Certificate Program
September 8, 2001

PROFESSIONAL & COMMUNITY ORGANIZATIONS:

NATIONAL

American Pharmaceutical Association (APHA), 1985 – Present

- Government Affairs Committee 2013 – Present
- Board of Trustees Executive Committee, 2011 – 2014
- Reelected to 2nd Term of APHA Board of Trustees.... 2016-2019
- APHA Delegate, 2011 - Present
- Strategic Directions Committee, 2011 - Present
- STAT Task Force - Reimbursement for Pharmacy Services, 1995, 1996
- Academy of Pharmaceutical Care Specialists, 1996 – Present
- Student APA, Vice-President, 1983 -1985

Board of Pharmacy Specialties 2009 – 2012

- Ambulatory Care Specialty Counsel

American Medical Association (AMA), 2004 - Present

- Current Procedural Terminology, Board of Trustees (CPT) Advisor
- Healthcare Professional Advisory Committee, Pharmacy (HCPAC)
- Drug Infusion Workgroup, 2005 – 2009
- Therapeutic Drug Monitoring Workgroup, 2013 - Present

American College of Clinical Pharmacology (ACCP), 1991 - Present

- Program Planning Committee, 1992, 1993, 1994

American College of Clinical Pharmacy (ACCP), 1988 - Present

- Clinical Affairs Committee, 1991 -1992
- Reimbursement Task Force, 1993 -1994
- Public & Professional Relations Committee, 1994 -1995

American Society of Consultant Pharmacists, 1988 - Present

American Society of Health-System Pharmacists (ASHP), 1985 – Present

- Specialty Practice Group (SPG):
- Section for Clinical Specialist, 1995 - Present
- Clinical Pharmacokinetics, 1990 -1995
- Vice-Chair, 1993 -1994
- Task Force on Unlabeled Uses of Medications, 1993 - 1994
- House of Delegates, 1993 – present
- Public Policy and Government Relations Committee, 1995 - 1996
- Vice-Chair, 1996 – 1997

Curriculum Vitae, Page 5

Daniel E. Buffington, PharmD, MBA

International Society for Pharmacoeconomics and Outcomes Research, 2000 - 2003

American Society of Microbiology (ASM), 1992 – 1997

STATE

University of Florida, College of Pharmacy 2010

- National Advisory Board

American Cancer Society, Hillsborough County, 1991 -1993

- Board of Directors, 1991 - 1993

American College of Clinical Pharmacology, Tampa Chapter, 1989 – Present

- Tampa Chapter, Program Committee, 1991 - 1993

Association for Clinical Research Professionals – SunCoast Chapter, Tampa, FL

- SunCoast Chapter, President-elect, 1999
- SunCoast Chapter, President, 2000

Florida Society of Health-System Pharmacists, 1989 – Present

- Experiential Education Innovation Forum - 2012
- President, 2000 - 2001
- President Elect, 1999
- Educational Affairs Council, Council Chairman, 1998
- Clinical Council/member, 1990 -1992
- Clinical Council/Chair, 1992 -1993
- House of Representative, 1993 - present
- Editor, FSHP/Digest, 1990 -1993
- Board of Directors, 1992 - Present
- Communications Council/Board Liaison, 1993 - 1994
- Reimbursement Task Force, 1993 - 1995
- Board of Directors 1993 -1995
- Legal and Regulatory Affairs Council Chairman, 1992, 1993 member, 2002-2005
- House of Delegates (Scribe), 2011 - Present

Southwest Florida Society of Hospital Pharmacists, 1989 - Present

- Nominations Committee 1990 - 1991
- President-Elect, 1991 - 1992
- President, 1992 - 1993

Florida Pharmacy Association, 1991 - Present

- Professional Affairs Council, 2000 – 2002; 2012-2014
- Public Affairs Committee, 1993
- Public Relations Committee, 1992 -1993

Hillsborough County Pharmacy Association, 1991 - Present

- Board of Directors, 1992 -1993

Atlanta Academy of Institutional Pharmacist, 1987 -1990

University of South Florida

- USF Institutional Review Board, Human Research, 1994 – 1996
- Health and Safety Committee, 1993 - 1996

- USF Community Music Division, Board of Directors, 1994 -1996

Mercer University School of Pharmacy

- National Deans List, 1986 -1987
- Mercer Dean's List - 1986, 1987
- Class of 1987, Vice-President, 1985 -1987
- Class of 1987, Secretary, 1984 -1985
- Collegiate Student Government Award, 1987
- Outstanding Young Men of America Award, 1987
- United States Achievement Academy Award, 1987
- Georgia Pharmaceutical Association: Board of Directors/Student Rep, 1984

COMMUNITY

Florida Pharmacy Foundation

- Board of Trustee, 2012 - present

LifePath Hospice and Palliative Care

- Executive Committee, 2005 - Present
- Bioethics Committee, Chairman, 2001 – 2003
- Board of Directors, Tampa, FL, 1999 – Present

Florida Community Pharmacy Network and Political Action Committee 2009 - Present

METRO BAND, Christian Music Ministry, 1994 – Present

Idlewild Baptist Church, Member, Orchestra, 1989 – Present

Great American Teach-In

- Young Middle Magnet School, 2002, 2003, 2004
- Lewis Elementary School, 2001, 2002, 2003, 2004

Hillsborough Regional Science Fair Judge, 2003 and 2001

SideFX: Medical Band (Charity Functions), 1993 – 2005

Judeo Christian Health Clinic Volunteer, 1991-1995

Paint Your Heart Out Tampa, Hillsborough County Medical Association 1989-1991

Community Relations Board, Ex-Officio Member, City of Clearwater, 1979

FRATERNITY - PROFESSIONAL

Kappa Psi Pharmaceutical Society, 1984

Phi Lambda Sigma - Leadership / Honor Society (Mercer University), 1985

- Vice-President, 1986 -1987
- National Convention Representative, 1986

HONORS / AWARDS / SCHOLARSHIPS:

Outstanding Pharmacy Service Award, 2013

University of Florida

University of South Florida Mock Trial, 2011

Appreciation for Service

Daniel B. Smith Award, 2010

Practice Excellence Award

Certificate of Appreciation May, 2009

The Education Awareness Campaign

University of South Florida's Radio Station

Curriculum Vitae, Page 8

Daniel E. Buffington, PharmD, MBA

07-06-15

Pinnacle Award, June, 2008

American Pharmacists Association Foundation

"Recognizing Contributions to Health Care Quality through the Medication Use Process"

Award of Excellence, June, 2008

American Society of Health-System Pharmacists

The Inaugural Distinguished Alumni Award, 2009

Mercer University, College of Pharmacy & Health Sciences

Sponsorship Award - Hillsborough County – NetSmartz® Launch, 2007

Internet Safety for Kids

Dr. G. Van Greene Distinguished Lecturer, 2005

Mercer University College of Pharmacy

Distinguished Achievement Award in Clinical Pharmacotherapeutic Practice, 2005

Academy of Pharmacy Practice and Management

American Pharmacists Association

Florida Pharmacist of the Year, 2002

Florida Society of Health-System Pharmacists (FSHP)

Florida Pharmacy Fore Runner Award, 1994

Florida Society of Hospital Pharmacists

President's Award, 1993

Florida Society of Hospital Pharmacists

Distinguished Service Award, 1991 -1993

Florida Pharmacy Association

Outstanding Service Award, 1993

Florida Society of Hospital Pharmacists

Bristol Laboratories Award, 1987

Mercer University, School of Pharmacy

Collegiate Student Government Award, 1987

Mercer University

Outstanding Young Men of America Award, 1987

Mercer University

United States Achievement Academy Award, 1987

Mercer University

Georgia Pharmaceutical Association (GPHA), 1986

Scholarship

Churches Home Foundation, 1986

Scholarship

Clearwater Community Service Award, 1980

City of Clearwater, FL

COURSE LECTURES:

University of South Florida, College of Nursing
Tampa, FL

Clinical Pharmacology for Advanced Nurse Practitioners (USF, NGR 6199)
Registered Nurse Practitioners - Graduate Program
Course Director & Lecturer

MKSAP Review – Clinical Pharmacology
MD Program, Residents & Fellows
Lecturer
Tampa, FL

University of South Florida, College of Public Health
Tampa, FL

Pharmacoepidemiology (6934) – “Pharmacoeconomics”
Lecturer

University of Florida College of Pharmacy
Gainesville, FL

Clinical Pharmacokinetics (PHA 4123, PHA 5121)
Aminoglycosides & Vancomycin Pharmacokinetics: Clinical Applications
BS & Doctor of Pharmacy Programs

Pharmacy Management (PHA 4210)
“Reimbursement for Pharmaceutical Care Services”
BS & Doctor of Pharmacy Programs

Clinical Pharmacy & Therapeutics
Non-Traditional Doctor of Pharmacy Program

Topics:

- Pharmacokinetics
- Gynecologic Malignancies
- Infectious Diseases (Sinusitis, Infectious Diarrhea)
- Allergic Rhinitis

RESEARCH PROTOCOLS:

2015

COV02520124: An Open-Label, Safety and Pharmacokinetic Study of Hydromorphone Hydrochloride Extended-Release Tablets (Once-Daily Hydromorphone) in Opioid-Tolerant Pediatric Subjects with Chronic Pain

2012

D3820C0005: A Randomized, Double-blind, Placebo-Controlled Study to Assess the Efficacy and Safety of NKTR-118 in Patients with Non-Cancer-Related Pain and Opioid-Induced Constipation (OIC)

2011

D3820C0004: A Randomized, Double-blind, Placebo-Controlled Study to Assess the Efficacy and Safety of NKTR-118 in Patients with Non-Cancer-Related Pain and Opioid-Induced Constipation (OIC)

GWCA0999: A multicenter, non-comparative, follow-on study to assess the long term safety of Sativex oromucosal spray (Sativex®; Nabiximols) therapy in patients with cancer related pain.

GWCA0958: A double blind, randomized, placebo-controlled, parallel group study of Sativex oromucosal spray (Sativex®; Nabiximols) in relieving pain in patients with advanced cancer, who experience inadequate analgesia during optimized chronic opioid therapy

2010

CQAB149B2223: A multi-center, randomized, double-blind, placebo controlled, parallel group, repeated-dose study to evaluate the efficacy, safety, tolerability and pharmacokinetics of three different dosing regimens of inhaled indacaterol maleate in patients with persistent asthma

GS-US-164-0216 The SWIFT Study: A Prospective, Randomized, Open-Label Phase IV Study to Evaluate the Rationale of Switching from Fixed-Dose Abacavir (ABC)/Lamivudine (3TC) to Fixed-Dose Tenofovir DF (TDF)/Emtricitabine (FTC) in Virologically-Suppressed, HIV-1 Infected Patients Maintained on a Ritonavir-Boosted Protease Inhibitor-Containing Antiretroviral Regimen

2009

The SWIFT Study: A Prospective, Randomized, Open-Label Phase IV Study to Evaluate the Rationale of Switching from Fixed-Dose Abacavir (ABC)/ Lamivudine (3TC) to Fixed-Dose Tenofovir DF (TDF)/Emtricitabine (FTC) in Virologically-Suppressed, HIV-1 Infected Patients Maintained on a Ritonavir-Boosted Protease Inhibitor-Containing Antiretroviral Regimen GS-US-164-0216

Blood Pressure and Metabolic Effects of Nebivolol Compared with Hydrochlorothiazide and Placebo in Hypertensive Patients with Impaired Glucose Tolerance or Impaired Fasting Glucose Protocol ID: NEB-MD-04

A double blind, randomized, placebo controlled, parallel group dose-range exploration study of Sativex® in relieving pain in patients with advanced cancer, who experience inadequate analgesia during optimized chronic opioid therapy GWCA0701

2005

An Open-Label, 12-Month Study to Evaluate the Safety, Tolerability, and Efficacy of ORAVESCENT® Fentanyl Citrate for the Management of Breakthrough Pain in Opioid-Tolerant Patients with Chronic Non-cancer Pain C25608/3040/BP/US (Cephalon)

A Double-Blind, Randomized, Placebo-Controlled Study to Evaluate the Efficacy and Safety of ORAVESCENT® Fentanyl Citrate for the Management of Breakthrough Pain in Opioid-Tolerant Patients With Chronic Neuropathic Pain C25608/3041/BP/US (Cephalon)

A Double-Blind, Randomized, Placebo-Controlled Study to Evaluate the Efficacy and Safety of ORAVESCENT® Fentanyl Citrate for the Management of Breakthrough Pain in Opioid-Tolerant Patients With Chronic Low Back Pain C25608/3042/BP/US (Cephalon)

Survey to Assess the Prevalence, Characteristics and Impact of Breakthrough Pain in Chronic Pain Patients with and without Cancer Managed by Clinicians Who are not Pain Specialists SMI05002

2004

THE SAFETY, TOLERABILITY, AND IMMUNOGENICITY OF ACAM2000 SMALLPOX VACCINE IN ADULTS WITH PREVIOUS SMALLPOX VACCINATION. A Randomized, Double-Blind, Fixed Dose, Phase 3 Comparison between ACAM2000 and Dryvax® Smallpox VaccinesH-400-012 (Acambis)

A Multicenter, Phase 3 Study to Confirm the Safety and Efficacy of Intravenous Doripenem in Complicated Lower Urinary Tract Infection or Pyelonephritis DORI-06 (Peninsula Pharmaceuticals)

THE SAFETY, TOLERABILITY, AND IMMUNOGENICITY OF ACAM2000 SMALLPOX VACCINE IN ADULTS WITHOUT PREVIOUS SMALLPOX VACCINATION. A Randomized, Double-Blind, Fixed Dose, Phase 3 Comparison between ACAM2000 and Dryvax® Smallpox VaccinesH-400-009 (Acambis)

An Open-Label, Long Term, Multi-Center, Intrathecal Ziconotide (PRIALT™) Effectiveness And Safety Trial (ZEST) In Patients With Chronic Severe Pain ELN92045-501

A Multi-Center, Open-Label, Long-Term Study of OraVescent® Fentanyl Citrate for the Treatment of Breakthrough Pain in Opioid-Tolerant Cancer Patients 099-15 (CIMA)

A Multi-Center, Double-Blind, Placebo-Controlled Study of OraVescent® Fentanyl Citrate for the Treatment of Breakthrough Pain in Opioid-Tolerant Cancer Patients 099-14 (CIMA)

2003

A multicenter, international, randomized, open-label, assessor-blind, non-inferiority study comparing the efficacy and safety of once-weekly subcutaneous SanOrg 34006 with the combination of (LMW)Heparin and vitamin K antagonist (VKA) in the treatment of acute symptomatic pulmonary embolism P64714 / EFC 3484 (Organon/Sanofi)

An Open-label, Multicenter Study of the Safety and Efficacy of Combined Intrathecal Infumorph and Ziconotide (Prialt): Addition of Infumorph in Patients Receiving Prialt for Severe Chronic Pain ELN92045-201 (Elan Pharmaceuticals)

A Double-Blind, Double-Dummy, Randomized, Placebo- and Active-Controlled, Multicenter, Parallel-Group Study of (R,R)-Formoterol in the Treatment of Subjects with Chronic Obstructive Pulmonary Disease 091-051 (Sepracor)

2002

A Phase III, Vehicle-Controlled Study of Topical Resiquimod (R-848) 0.01% Gel Applied 2 Times per Week for 1 Week for Each Recurrence of Anogenital Herpes over 52 Weeks Study 1452-RESI (3M Pharmaceuticals)

A Retrospective, Case-Control Study to Investigate Genetic Polymorphisms in HIV Infected Subjects Who Developed Hypersensitivity Following Treatment with Abacavir CNA30032 (GlaxoSmithKline)

Vehicle-Controlled, Double-Blind Study to Assess the Safety and Efficacy of Imiquimod 5% Cream Applied Once Daily 3 Days per Week for the Treatment of Actinic Keratoses on the Head 1447-IMIQ (3M Pharmaceuticals)

Curriculum Vitae, Page 16

Daniel E. Buffington, PharmD, MBA
07-06-15

An Open-label, Long-term, Multicenter Study of Ziconotide Administered Intrathecally ELN92045-352 (Elan Pharmaceuticals)

A RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED STUDY OF INTRATHECAL ZICONOTIDE IN ADULTS WITH SEVERE CHRONIC PAIN ELN92045-301 (Elan Pharmaceuticals)

AN OPEN-LABEL, LONG-TERM, MULTICENTER STUDY OF ZICONOTIDE ADMINISTERED INTRATHECALLY ELN92045-351, IND # 45,718 (Elan Pharmaceuticals)

A Case Control Investigation Exploring the Relationship Between Gene Variants (HAPTM Markers) and Agranulocytosis or Granulocytopenia In Adult Patients Treated With Clozapine

A 6-month open label, multi-national, effectiveness, and safety study of Elidel[®] (pimecrolimus) Cream, 1% in subjects with atopic dermatitis Novartis CASM981 C2405

2001

APV30001: A Phase III, randomised, multicenter, parallel, open-label study to compare the efficacy, safety and tolerability of GW433908 (1395mg bid) and Nelfinavir (1250mg bid) over 48 weeks in antiretroviral therapy naïve HIV-1 Infected Adults (Glaxo Wellcome)

APV30005: An open-label phase III study to assess the long term safety profile of GW43398 containing regimens in HIV-1 infected subjects (Glaxo Wellcome)

A Phase II, Randomized, Double-Blind, Vehicle-Controlled, Dose Frequency Response Study of Topical Resiquimod (R-848) Gel Applied to Anogenital Herpes Lesions Once, Twice or Three Times Per Week for One Recurrence to Prevent Future Recurrences 1411-RESI (3M Pharmaceuticals)

Vehicle-Controlled, Double-Blind Study to Assess the Safety and Efficacy of Imiquimod 5% Cream Applied Once Daily 3 Days per Week for the Treatment of Actinic Keratoses on the Head (3M Pharmaceuticals)

A prospective, randomized, double blind, multicenter trial assessing the safety and efficacy of sequential (intravenous/oral) BAY 12 -8039 (moxifloxacin) 400 mg every 24 hr compared to intravenous piperacillin/tazobactam 3.0/0.375 g every 6 hr followed by oral amoxicillin/clavulanic acid suspension 800 mg every 12 hr for the treatment of patients with complicated skin and skin structure infections (Bayer)

Protocol #: CPS 2000-01A An Open Label, Phase 1 Study of the Safety and Tolerability of Cocoloba uvifera in Healthy Volunteers

Omapatrilat Cardiovascular Treatment Assessment versus Enalapril (OCTAVE) Protocol Number: CV137-120

Protocol Number: CPS.USF.001 An Open Labeled, Single Blind, Patient-Controlled Study of the Safety and Efficacy of Clobetasol Propionate Foam, 0.05% in the Treatment of Alopecia Areata

CNA30021: A phase III, 48-week, randomized, double-blind, multicentre study to evaluate the safety and efficacy of abacavir (ABC) 600mg once-daily (QD) vs abacavir 300mg BID in combination with lamivudine (3TC) (300mg QD) and efavirenz (EFV) (600mg QD) in antiretroviral therapy naïve HIV-1 infected subjects (GlaxoSmithKline)

A Phase III, randomized, multicenter, parallel, open-label study to compare the efficacy, safety, and tolerability of GW433908 1395 mg bid and Nelfinavir 1250 mg bid over 48 weeks in antiretroviral therapy naïve HIV-1 Infected Adults (Glaxo)

Curriculum Vitae, Page 17

Daniel E. Buffington, PharmD, MBA
07-06-15

A Multicenter Dose Randomized Evaluation of Targretin® Capsules + PUVA In Patients With Stage IB – IIA Cutaneous T-Cell Lymphoma IND No. 61,896 (Ligand)

A Multicenter, Randomized, Open-Label Study Comparing the Efficacy And Safety Of Once Daily (OD) ORG 31540/SR90107A Versus Adjusted-Dose Intravenous (IV) Unfractionated Heparin (UFH) In The Initial Treatment Of Acute Symptomatic Pulmonary Embolism (PE) (Organon)

Protocol Number: 25000/592. An Open, Non-Comparative Multicenter Study to Assess the Efficacy and Safety of Oral Augmentin® SR 2000/125 mg Twice Daily for 10 Days in the Treatment of Acute Bacterial Sinusitis in Adults (Smith-Kline Beecham)

VER001-5: Phase II Pilot, Randomized, Open-Label, Multi-center Study to Evaluate the Safety and Efficacy of Dalbavancin (V-Glycopeptide) Versus Investigator/Physician Designated Comparator in Skin and Soft Tissue Infection IND # 60,613 (Vericor)

2000

A Phase III, Multicenter, Randomized, Parallel Group, Evaluator Blinded, Comparative Study to Evaluate the Effectiveness and Safety of "Topical Otic CILODEX™ (ciprofloxacin 0.3%, dexamethasone 0.1%) Suspension Compared to CILOXAN® (ciprofloxacin 0.3%) Solution and CORTISPORIN® Suspension (neomycin 0.35%, polymyxin 10,000 IU/mL, hydrocortisone 1.0%) for Treatment of Patients with Moderate to Severe Acute Otitis External

1999

Protocol Title: Safety and Efficacy of Intravenous HMR4396 and Epogen® for the Management of Anemia in Subjects with Chronic Renal Failure Requiring Hemodialysis HMR4396A/3001

An Open-Label, Long-Term Safety and Tolerability Study of Ziconotide® Administered Intrathecally to Patients with Chronic, Severe Pain (Elan Pharmaceuticals)

1998

A One-Year Randomized, Double Blind, Placebo Controlled Study of Alosetron (GR68755) 1mg BID in Female Subjects with Irritable Bowel Syndrome S3B30006

A Open, Non-Comparative Multicentre Study to Assess the Efficacy and Safety of Oral Augmentin SR 2000/125 mg, Twice Daily for 10 Days in the Treatment of Acute Bacterial Sinusitis in Adults, Protocol BRL-02500/551 (Smith-Kline Beecham)

1997

A Multicenter, Double-Blind, Phase III, Adjuvant-Controlled Study of the Effect of 10 units of HIV-1 Immunogen Compared to IFA Alone Every 12 Weeks on AIDS-Free Survival in Subjects with HIV Infection and CD4 T Lymphocytes Between 300-549 cells mcg Regardless of Concomitant HIV Therapies Protocol IRC-806 (Immune Response Corporation)

A Randomized, Double Blind, Placebo Controlled, Efficacy and Safety Study of Oral Lobucavir In Patients With Recurrent Herpes Labialis, AI459-012 (Bristol-Myers Squibb)

A Randomized, Double Blind, Placebo Controlled, Efficacy and Safety Study of Oral Lobucavir In Patients With Recurrent Genital Herpes, AI459-011 (Bristol-Myers Squibb)

Phase II Multi-Center, Randomized, Placebo-Controlled, Two-Step Dose-Escalation Safety, Tolerability, and Hypothesis Generating Trial of Recombinant Tissue Factor Pathway Inhibitor (rTFPI), SC-59735 in Sepsis Patients, Protocol CS-TF004 (Chiron)

Curriculum Vitae, Page 18

Daniel E. Buffington, PharmD, MBA

07-06-15

1996

A Randomized, Double-Blind, Multicenter Trial Assessing the Safety and Efficacy of a Single Intravenous Dose of CP-116,517 (alatrofloxin) Compared with Cefotetan for the Prophylaxis of Infection Following Colorectal Surgery #154-128 (Pfizer Central Research)

1995

Pfizer 154-128 Colo-Rectal Prophylaxis (Pfizer)

Pfizer 154-124 Intraabdominal Infections (Pfizer)

Matrix 66-94-2 5 FU/epi Basal Cell Carcinoma (Matrix)

RPR 106972 Streptogramin Sinusitis (Rhone-Poulenc Rorer)

Oral Cefpodoxime Proxetil (Vantin®) Tablets in the Treatment of Acute Maxillary Sinusitis in Adults #M/116/40/0108. (Upjohn Company)

A Double Blind, Comparative Study of the Efficacy and Safety of Orally Administered OPC-17116 and Clarithromycin in the Treatment of Patients with Community Acquired Pneumonia #106-94-206 (Otsuka America Pharmaceuticals, Inc.)

A Prospective, Randomized, Double-Blind, Parallel, Control, Multicenter Trial Comparing The Efficacy and Safety of 1% terbinafine (Lamisil®) Cream Applied Once Daily to Placebo In The Treatment of Cutaneous Candidiasis SFC-352 (Sandoz Pharmaceuticals)

1994

Multicenter, Randomized, Partially-Blind, Parallel Group, Clinical Trial to Compare the Efficacy and Safety of Twice and Once Daily Subcutaneously Administered Enoxaparin and Continuous Infusion Heparin in the Treatment of Patients with Deep Vein Thrombosis and Pulmonary Embolism RP-54536-529 (Rhone-Poulenc Roher)

Multicenter, Double Blind, Comparative Study of Intravenous meropenem (Merrem®) and imipenem (Primaxin®) for the Treatment of Nosocomial Lower Respiratory Tract Infections 359IL/0059 (Zeneca Pharmaceuticals)

Open, Non-comparative, Multicenter Study of RP64206 sparfloxacin in the Treatment of Acute Bacterial Maxillary Sinusitis RP64206-359 (Rhone-Poulenc Roher)

A Double-Blind, Parallel Group, Randomized Trial to Compare the Efficacy and Safety of Enoxaparin 40mg SC QD and Unfractionated Heparin 5000 IU SC TID During 6-12 Days for Prevention of Deep Vein Thrombosis (DVT) in 800 Evaluable Patients After Planned Elective Curative Cancer Surgery RP-54563-567 (Rhone-Poulenc Roher)

A Double-Blind Multinational Trial Comparing Sorivudine (BV-araU) (SQ 32,756) vs. Acyclovir for the Treatment of Acute Localized Herpes Zoster and the Effect on Zoster-associated Pain In Immunocompetent Subjects. BMS-AI458-072-008 (Bristol Myers Squibb)

Assessment and Analysis of Risk Factors for the Development of Candidemia in Hospitalized Patients, (Pfizer)

1993

Pharmacoeconomic Analysis of Systemic Antifungal Prescribing Patterns. (Pfizer/Roerig)

A Multicenter, Double-Blind Comparative Study of Intravenous Merrem (Meropenem) and Primaxin (imipenem-cilastatin) for the Treatment of Intra-Abdominal Infections. (Zeneca)

A Multicenter, Double-Blind Comparative Study of Intravenous Merrem (Meropenem) and Primaxin (Imipenem-Cilastatin) for the Treatment of Nosocomial Lower Respiratory Tract Infections (Zeneca)

Double Blind, Placebo-Controlled Study of the Efficacy and Safety of three doses of CP-127 and Placebo in Patients with Presumed Sepsis and the Systemic Inflammatory Response Syndrome (SIRS) CP-0127-92-002 (Cortech, Inc)

Double Blind, Randomized, Comparative Study of RP-64206 (Sparfloxacin) vs. Cefaclor in the Treatment of Community-Acquired Pneumonia (Rhone-Poulenc Rorer)

A Randomized, Double Blind, Placebo-Controlled, Multicenter Study of Oral GR122311X Compared with Ranitidine and GR88502X for the Prophylaxis of Nonsteroidal Anti-Inflammatory Drug Associated Gastric or Duodenal Ulcers in Patients with Osteo- or Rheumatoid Arthritis and without a History of Gastric or Duodenal Ulcers (Glaxo)

Prospective, Randomized, Third Party-Blind, Study to Compare the Safety and Efficacy of Ciprofloxacin (Sequential IV/PO) with Intravenous Ceftazidime and Tobramycin in the Treatment of Pediatric Cystic Fibrosis Patients with Acute Pulmonary Exacerbation D91-024, BAY o9867m BAY q3939 (Miles, Inc)

A Multicenter, Open-Label Treatment Protocol to Provide Aerosolized rhDNase Therapy to Patients with Cystic Fibrosis. rhDNase Protocol Z0507g-A2 (Genetech)

A Multicenter Epidemiologic Protocol to Evaluate Pulmonary Function and the Rate of Respiratory Tract Infections in Patients with Cystic Fibrosis rhDNase Z0525n (Genetech)

Lorabid, 200 mg vs. 400 mg BID in Sinusitis with Bacteriology. Lorabid Protocol B9U-MC-AZBX(b) IND No. 29957, NDA No. 50-668 (Eli Lilly)

Uncomparative Study of Sparfloxacin in Acute Sinusitis (Rhone-Poulenc Rorer)

1992

Comparison of the Safety and Efficacy of Cefodizime versus Ceftriaxone in the Treatment of Complicated Urinary Tract Infections. Cefodizime CSZ-300 (Fujisawa Pharmaceutical Corporation)

A Multicenter, Double-blind, Randomized, Comparative Study of the Efficacy and Safety of Temafloxacin Intravenous/Oral Sequential Therapy Versus Cefuroxime with or without Erythromycin Intravenous/Oral Sequential Therapy in the Treatment of Hospitalized Patients with Community Acquired Pneumonia. Temafloxacin #M91-651. (Abbott Laboratories)

A Phase III, Multicenter, Double-Blind, Placebo-Controlled, Parallel Study to Evaluate the Safety and Efficacy of Aerosolized Recombinant Human DNASE I (rhDNase) in Patients with Cystic Fibrosis (Genentech, Inc.)

Centocor: HA-1A™ Efficacy in Septic Shock Trial CHESS #C0041T20 (Centocor, Inc.)

A Randomized, Double-Blind Repeat-Dose Crossover Study to Determine the Safety and Efficacy of sustained Versus Immediate Release Codeine Sulfate on Chronic Cancer Pain. Codeine #CSR-0192 (Roxane Laboratories)

A Randomized, Double-Blind Comparative Study of the Safety and Efficacy of Sustained Versus Immediate Release Codeine Sulfate in the Treatment of Chronic Cancer Pain. Codeine #CSR-0292 (Roxane Laboratories.)

A Multicenter Randomized, Double Blind, Placebo-Controlled Evaluation of Healing and

Relapse Rates Following Oral GR122311X Compared with GR88502X, Ranitidine and Placebo in Patients with Duodenal Ulcer. Ranitidine #H2B-302 (Glaxo, Inc.)

A Multicenter Randomized, Double-Blind, Placebo-Controlled Evaluation of Healing and Relapse Rates Following Oral GR122311X Compared with GR88502X, Ranitidine and Placebo in Patients with Benign Gastric Ulcer. Ranitidine #H2B-312 (Glaxo, Inc.)

A Multicenter, Open-Label Treatment Protocol to Provide Aerosolized rhDNase Therapy to Patients with Cystic Fibrosis (Genentech, Inc.)

Prospective, Double Blind, Controlled, Randomized, Multi-Center Comparison of the Safety and Efficacy of Intravenous Ciprofloxacin Versus Intravenous Imipenem for the Treatment of Patients with the Sepsis Syndrome (Miles, Inc.)

RENOVA for the Treatment of Photo damaged Skin (Ortho Pharmaceuticals)

A Multicenter, Controlled Evaluation of the Safety and Efficacy of Repeated Oral Doses of Vicoprofen (hydrocodone bitartrate with ibuprofen) for the Treatment of Chronic Pain. Vicoprofen VP-04 IND No. 29498 (Knoll Pharmaceuticals)

1991

A Prospective Comparison of Ondansetron (IV) and Dexamethasone (PO) Versus Prochlorperazine (PO) and Dexamethasone (PO) for the Prevention of Post Chemotherapy Related Nausea and Vomiting

A Comparative Study of the Safety and Efficacy of BIOLID versus EES in the Treatment of Group A Beta-Hemolytic Streptococcal Pharyngitis. BIOLID BE-C200 (Belmac Corporation)

1989

A Randomized, Prospective, Comparative Study of the Efficacy of Cefoperazone/Sulbactam Versus Ceftazidime Plus Vancomycin Versus Ticarcillin Plus Gentamicin in Febrile Neutropenic Patients. Cefoperazone/Sulbactam 88-S-137. (Pfizer Pharmaceuticals)

1988

An Open, Prospective Study to Evaluate the Incidence of Prothrombin Time Elevation and Clinical Bleeding in Patients Receiving One of Ten Selected Antibiotics. PT Elevation 88-R-041. (Pfizer Pharmaceuticals)

Imipenem-Cilastatin Efficacy, Tolerability and Economic Comparisons to Combination Antibiotic Therapy. Imipenem-Cilastatin.

A Comparison of Ampicillin/Sulbactam Versus Cefoxitin in the Prevention of Infections Complicating Radical Abdominal Hysterectomy. Ampicillin/Sulbactam 87-S-421. (Pfizer Pharmaceuticals)

Evaluation of Antibiotic Prophylaxis in Open Heart Surgery.

A Study of the Cost of Administration of Vancomycin and a Comparison with Alternative Antibiotic Therapy. Vancomycin. (Merrell Dow Pharmaceutical, Inc.)

1987

Evaluation of Gentamicin Levels Obtained from Hickman Catheters in a Hematology Population. Hickman Catheters HIC-118-87
